TREATMENT MENU

DERMACENTER
MEDICAL SPA

STELLAR M22 IPL

Skin rejuvenation uses intense pulsed light (IPL) technology to improve the appearance of the face, chest and neck area. These treatments minimize redness, veins, broken capillaries, acne scars, sun spots, age spots and other related flaws on the face, neck, décolleté, hands and body. The procedure has no effect on the skin itself and the light energy encourages the production of collagen, improving the skin's overall appearance. \$450*

ResurFX

ResurFX is a non-ablative fractional laser, meaning it can emit powerful light energy without visibly damaging the outer layer of skin. The fact that it is a fractional device means that it emits energy in a dotted pattern that leaves some skin undamaged, resulting in less discomfort and downtime. The laser is applied to create controlled thermal damage and micro-injuries. As these micro-injuries heal, new collagen and elastin are produced, resulting in resilient, glowing skin. ResurFX treats a wide range of issues such as age spots or sun spots, fine lines and wrinkles, stretch marks or striae, hyperpigmentation and uneven skin tone, scars from acne or surgery, and loose skin. \$900*

Photofabulous

ResurFX can be combined with an IPL (Intense Pulsed Light) for a Photofractional treatment that addresses multiple skin concerns in one procedure. The IPL will target your skin on a more superficial level, treating brown spots, telangiectasia and redness. While the ResurFX laser treats deeper in the skin to promote collagen production, addressing lines, wrinkles and the texture of your skin. \$1200*

SMOOTHGLO

SmoothGlo is a combination treatment of Intense Pulsed Light (IPL) and Radiofrequency (RF) microneedling. When these two technologies are performed in sequence, they produce synergistic and superior results that rejuvenates the skin by improving its texture, tone, and volume. It also reduces excess pigmentation, laxity, acne scars, fine lines, and wrinkles. SmoothGlo reverses the signs of aging by delivering both immediate and accumulative results with full results achieved in 3-4 visits with little to no downtime. \$1500**

Our Medical Facials

CHEMICAL PEEL

Lighten freckles, age spots and uneven pigmentation and smooth the overall texture of your face. A chemical peel uses acids in a formula specially tailored to each client's skin care needs. A chemical peel from the DermaCenter smooths overall texture, leaving your skin feeling softer and fresher with a youthful glow. *Starting at \$150**

VI PEEL

A VI (Vitality Institute) peel is a type of chemical peel that is designed to help improve the skin's tone and texture. It is a composition of chemicals including salicylic acid, minerals, retinoic acid, TCA, and phenol. These ingredients work together to help remove acne scars, acne, melasma, rosacea, sun damage, and hyperpigmentation. *Starting at \$350**

DERMAPEEL

A Dermapeel is a combination of Dermaplaning ("skin blading") and a chemical peel. The skin will be left with a soft, smooth and supple appearance. \$200*

GRATUITY NOT INCLUDED

* Multi-session packages of 3 or more are available at a discount

TRIPOLAR RADIOFREQUENCY

Radiofrequency heats the skin and stimulates the natural production of collagen. This helps strengthen and thicken the skin to improve its overall quality and appearance. It is a non-invasive way to lift and smooth the face and all areas of the body. \$400*

SKINPEN PRECISION MICRO-NEEDLING

Microneedling, also known as collagen induction therapy, is a minimally invasive skin rejuvenation procedure that helps minimize the signs of aging, improve the appearance of acne scars and rejuvenate aging skin. The SkinPen® microneedling device causes controlled micro-injuries that stimulate the body's natural wound healing process. The micro-injuries trigger the release of cytokines and growth factors that lead to remodeling of collagen and elastin. This reduces the signs of aging; skin texture, fine lines and wrinkles and improves the appearance of acne scarring. Safe for all skin types, light to dark, and effective on all body parts, including face, neck and décolletage. \$400*

VOLUDERM RF MICRONEEDLING

Radiofrequency (RF) micro-needling adds the element of radiofrequency energy to the traditional micro-needling procedure. The RF energy is delivered via small needles into the dermis. In addition to the benefits seen with the micro-injury provided by the traditional microneedles, RF micro-needling also delivers RF energy deep into the dermis further enhancing skin tightening and scar reduction. Safe for all skin types. \$750 (with PRP \$1000)*

PRP FACIAL (VAMPIRE FACIAL)

Platelet Rich Plasma (PRP) is derived from a quick non-surgical procedure that involves drawing a small amount of blood that is then processed to isolate growth factors. Then the SkinPen micro-needling device is used to create microchannels on the skin. The process of micro-needling creates a mild tissue healing response in the skin which can help to stimulate collagen production. The last step is smoothing and introducing the PRP with growth factors as a mask to the microchannels for optimal function as they stimulate tissue production, tightening, and overall skin rejuvenation. \$1000*
